## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Gouba '636.

Gouba teaches a link cutting machine which is structurally similar to the Applicant's claimed packing mechanism. Specifically, Gouba teaches an elongated packing arm 38 having an associated length and opposing first and second end portions. The first end portion having a fork-like or curved shape. The fork member is addpated to periodically contact a portion of s suspended elongated item held on a carrier member (16, 18, 20). A drive mechanism, see Figure 1, attached to the second end portion (unnumbered). As for claims 2-4, the drive mechanism includes mechanical linkages with a rotating wheel, such that the wheel causes the linkage to direct the packing arm to travel in the predetermined motion and stall(non contact) for an interval of time between the rearward and forward travel. In regards to claims 5 and 6, the carrier member travels in an unidirectional travel path. Regarding claims 7-12. the elongated item is a meat product. Further, the system of Gouba is able to move linked or non-linked products. In regards to claims 13-15, the packing arm travels a first path(two or three dimensional) and the carrier member is cooperably aligned with and below the packing arm. Further,

a stationary platform (a base) supports a portion of the drive mechanism. See Figure 2.

### ***Conclusion***

Summary: Claims 1-15 have been rejected.
